

Psql commands

Psql commands

psql is a terminal-based front-end to PostgreSQL. It enables you to type in queries interactively, issue them to PostgreSQL, and see the query results.

- `\c dbname username` -> connects to database
- `\l` -> shows list of databases
- `\dt` -> shows tables list of connected database
- `\d table_name` -> shows metadata of a table
- `\dn` -> shows schema list
- `\df` -> shows functions list
- `\dv` -> shows views list
- `\du` -> shows users list
- `\g` -> executes previous executed query
- `\s` -> history
- `\?` -> help
- `\!` clear
- `\h ALTER TABLE` -> help
- `\timing`
- `\ef [function name]` -> shows functions
- `\a, \H` -> output format
- `\q` -> quit psql

The End
